

Math Facts

Ontario's Renewed Math Strategy will help our students, teachers, schools and districts in achieving stronger math results and better position our young people for the jobs of today and tomorrow. The Renewed Math Strategy is an Early Years to Grade 12 strategy that will benefit from and mobilize the latest research and lessons learned regarding effective math learning, teaching and assessment. The strategy will provide new forms of support to all schools, increased support to some schools with greater needs in math achievement, and intensive support to a select group of schools with the greatest needs in math achievement. It will promote greater collaboration between everyone, including educators, students, leaders and parents. Learn more [here](#).
